REGISTRY LOCK IN FURY

Presented by: Tongfeng Zhang

Registry lock in Fury

- Registry lock can be purchased on a per-domain basis
  - Renewed and charged every year
- Domains with registry lock purchased can be unlocked and locked again to make changes
- When Locking a domain, contacts and hosts associated with the domain can be optional locked if the contacts and hosts are not shared by other domains
- When unlocking a domain, contacts and hosts are always unlocked with the domain
- When a domain is locked, the following EPP statuses are applied:
  - ServerDeleteProhibted
  - ServerUpdateProhibited
  - ServerTransferProhibited

Authorization & authentication

- Out of band process to authorize a user for requesting registry lock

- All registry lock related operations once validated, must be performed by a type of admin users in Fury Web portal.

- The admin users must be created with:

  – Special privilege

  – 2FA

Issues

- Authorization process is very manual
  - Low participation from registrars
- Operations can only be initiated from Fury Web portal, not EPP
  - Authentication & authorization involved out of band steps
